While Cobb does not directly process chickens, our World Technical Support team specializes in processing best practices and outcome-based strategies that help our customers get the best results. The team visits our global network of distributors and integrators’ processing facilities on a regular basis.

We are dedicated to the health and well-being of the chickens we breed, raise, and distribute worldwide. Cobb regularly educates and trains all team members and growers about our clear standards and expectations for bird handling, care, and biosecurity. Our team of skilled veterinarians manages flock health and coordinates with industry researchers and experts to continuously advance poultry health and well-being.

Efficiency, consistency, and uniformity
Processing

While Cobb does not directly process chickens, our World Technical Support team specializes in processing best practices and outcome-based strategies that help our customers get the best results. The team visits our global network of distributors and integrators’ processing facilities on a regular basis.

Purchase

Our farms

We operate three types of farms to produce and collect the eggs that become Cobb products: Pedigree, Great Grandparent (GGP), and Grandparent (GP). Some eggs and day-old chicks are sold to customers, while others stay on the farm to become pedigree stock.

Transportation

Transportation is a critical part of our business because safe and humane bird handling means our customers receive the best quality product. Local drivers deliver the eggs collected from the farms to our hatcheries. Cross-country drivers transport day-old chicks from the hatcheries to Cobb customers.

Keeping our birds safe
Animal welfare & quality assurance

What a mash!
The feed mills

Three feed mills store, mix, and deliver feed to all of our operations. Nutritionists develop the feed formulas to include an ideal blend of protein, carbohydrates, vitamins, and minerals.

Let’s hatch some chicks!
Our hatcheries

Eggs are transported from the GGP farms to our hatcheries twice each week where they are set in incubators until they hatch after 21 days. Then we grade, vaccinate, count, and deliver the chicks to customers.
